

PARTH RAJESH CHANDURKAR

Cloud & DevOps Engineer

☎ +91-7057252266 ✉ parthrchn27@gmail.com 🌐 github.com/ParthrChandurkar 🔗 linkedin.com/in/parth-chandurkar

Skills

Languages: C, C++, Python, Java, SQL, Bash/Shell Scripting

Cloud & DevOps: AWS (EC2, S3, RDS, Lambda, IAM, DynamoDB, Athena, CloudWatch), Docker, Kubernetes, Terraform, Ansible, Helm, Jenkins, CI/CD Pipelines, Git, Linux

Observability & IaC: Prometheus, Grafana, Loki, Alertmanager, Infrastructure as Code, High Availability, Microservices

AI & Automation: n8n, Zapier, Make (Integromat), Workflow Automation, REST API Integration, NLP, MLOps

Web & Databases: React, Node.js, Flask, FastAPI, Spring Boot, MongoDB, MySQL, PostgreSQL

Experience

OrbisFlow – AI-Assisted Invoice Approval Workflow Platform

Mar 2025 – Jun 2025

Full Stack & AI Automation Engineer – Freelance | *Spring Boot* | *FastAPI* | *Next.js* | *Docker*

[🔗 GitHub](#)

- Eliminated manual email and spreadsheet-based invoice processing by delivering an end-to-end approval automation platform across Employee, Manager, and Finance roles; integrated a FastAPI OCR microservice using Tesseract to auto-extract and validate invoice fields, enforcing RBAC, JWT authentication, and subject-bound CSRF protection throughout.
- Shipped an append-only audit trail with optimistic locking and workflow-state validation to guarantee zero double-processing under concurrent approvals; configured GitHub Actions CI/CD running Maven, pytest, Vitest, and Playwright test suites on every pull request, maintaining full test coverage across the three-service stack.
- Enforced a security-first microservices topology isolating the FastAPI OCR service behind Spring Boot — inaccessible to the browser — keeping S3 credentials outside the client trust boundary and reducing the attack surface for production AWS deployment.

ZenithMind – AI-Powered Mental Health Assistant

Nov 2024 – Feb 2025

Cloud & AI Engineer – Capstone | [IEEE Published Paper](#) | *React JS* | *AWS EC2* | *Kubernetes* | *NLP*

[🔗 GitHub](#)

- Architected and delivered a CBT-based mental wellness platform featuring an NLP-driven AI chatbot, sentiment analysis, and virtual therapist escalation logic; shipped as high-availability microservices on AWS EC2 and load-balanced via Kubernetes HPA, achieving **33%** increase in user engagement during stress episodes.
- Configured Kubernetes Horizontal Pod Autoscaler and AWS CloudWatch observability alarms to handle traffic spikes without over-provisioning; sustained **99.5%** uptime while reducing idle compute costs by **20%**; JWT-based authentication and real-time dashboards improved user retention by **35%**.

Projects

InfraWatch – Zero-Touch Deployments with Full Infrastructure Visibility

Jan 2025 – Apr 2025

FastAPI | *React* | *Docker* | *Kubernetes* | *Terraform* | *Prometheus* | *Grafana* | *GitHub Actions*

[🔗 GitHub](#)

- Built a production-grade cloud-native platform enabling zero-touch deployments; GitHub Actions CI/CD pipeline automatically builds Docker images, pushes to DockerHub, and applies Kubernetes manifests – eliminating all manual release steps and cutting cycle time by **60%**.
- Provisioned full observability stack (Prometheus, Grafana, Alertmanager, Loki, Promtail) via Terraform and Helm; configured Kubernetes HPA with CPU-based auto-scaling and pod crash-loop alerts, with a React dashboard delivering live CPU, memory, request-rate, and log streaming across all services.

SeatFlow – Ticket Booking System

Apr 2025 – Jun 2025

Node.js | *TypeScript* | *PostgreSQL* | *Prisma* | *React* | *JWT* | *Render* | *Vercel*

[🔗 GitHub](#)

- Resolved seat double-booking race conditions using atomic conditional SQL updates — a seat transitions from **AVAILABLE** to **HELD** only if the row is still available at update time — releasing expired holds every 5 seconds via **node-cron**, ensuring concurrency safety across simultaneous customer sessions.
- Shipped a 30-minute cascading waitlist system where cancelled bookings automatically offer freed seats to the next waiting customer; integrated Resend for QR-code booking confirmation emails, JWT access/refresh token auth with bcrypt, and three-role RBAC (Customer, Organiser, Admin) across 22 Jest/Supertest integration tests covering concurrency, cancellation, and waitlist expiry flows.

Education

Vishwakarma Institute of Information Technology (VIIT), Pune

Aug 2023 – Present

Bachelor of Technology in Information Technology

CGPA: 8.71 / 10

- Relevant Coursework: Cloud Computing, Database Management Systems, Computer Networks, Operating Systems, Internet of Things (IoT), Machine Learning, System Design, Risk Analysis and Management.

Certifications

- **IBM DevOps and Software Engineering Professional Certificate** – Coursera

[View Certificate](#)

- **AWS Certified Cloud Practitioner Specialization** – Amazon Web Services / Udemy

[View Certificate](#)

- **CCNA v7: Introduction to Networks** – Cisco Networking Academy

[View Certificate](#)

- **Career Essentials in Project Management** – Microsoft and LinkedIn Learning

[View Certificate](#)
